

Rishi Shah

📍 Petlad, Gujarat, India – 388450 ✉ rishishah457@gmail.com ☎ +91 90230 80466

in [linkedin.com/in/rishishah2203](https://www.linkedin.com/in/rishishah2203) 📄 github.com/rishi-shah-2211

Skills

- **Languages:** Python, JavaScript, TypeScript, SQL, C, C++, Java
- **Databases & ORMs:** PostgreSQL, Drizzle ORM, Prisma ORM
- **Frameworks & Libraries:** Next.js, React, Tailwind CSS, TanStack Query, Zod, React Hook Form, Framer Motion, Recharts, Three.js, react-three-fiber, Radix UI, shadcn/ui, @react-pdf/renderer, Better Auth, scikit-learn, XGBoost, ONNX, NumPy, Pandas
- **ML & AI:** Linear/Logistic Regression, Random Forest, XGBoost, ONNX Runtime, LLM-grounded RAG copilots, prompt engineering
- **Tools & Platforms:** Git, GitHub, Vercel, Neon, Turborepo, pnpm, ESLint, Stripe, Jupyter Notebook, VS Code

Education

G H Patel College of Engineering and Technology 2021 – 2025

B.Tech in Computer Science and Engineering (IoT)

- CGPA: 7.57 / 10.0 • Charutar Vidya Mandal University, Anand, Gujarat, India
- Class XII (HSC): 92 percentile • Class X (SSC): 89 percentile
- **Relevant Coursework:** Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Machine Learning, Artificial Intelligence, Web Technologies, IoT Systems

Experience

Software Engineer Intern Ahmedabad, Gujarat
TatvaSoft May 2024

- Built role-based access control for the “Virtual Community Support” platform using JWT authentication, supporting distinct admin, organizer, and volunteer permissions.
- Developed administrative workflows for mission creation, user oversight, and profile management, consolidating previously fragmented operations into a unified dashboard.
- Implemented user-facing flows for mission discovery, role applications, and profile updates, reducing friction across the volunteer onboarding journey.

Software Engineer Intern (Front-end) Vadodara, Gujarat
WeblogySphere Pvt. Ltd. Jan – Apr 2025

- Designed and shipped the GlowScape landing page with responsive layouts and modern UI principles using Tailwind CSS.
- Independently delivered Ecommerce, a full-stack e-commerce application, from schema design through production deployment.
- Integrated Stripe for secure payment processing and Prisma ORM for type-safe PostgreSQL access; stack included Next.js, TypeScript, React Native, and Tailwind CSS.

Projects

VANTAGE – Founder Analytics Platform vantage-rs.vercel.app

- Architected a full-stack founder-analytics platform benchmarking Canadian SaaS startups against a 500-company synthetic cohort via deterministic percentile and growth-rate computations.
- Enforced a strict numerical/linguistic boundary — all financial computation in pure TypeScript, with the Groq llama-3.3-70b LLM scoped exclusively to narrative prose — guaranteeing every reported figure is fully reproducible.
- Shipped automated investor-memo PDF generation with @react-pdf/renderer, composing cohort-relative percentile charts alongside LLM-authored executive commentary in a single render pass.
- **Tech Stack:** Next.js 15, TypeScript, Tailwind CSS v4, Drizzle ORM, Neon Postgres, Better Auth, Groq SDK, @react-pdf/renderer, Recharts, TanStack Query, Zod

BELLWETHER – ML Model Comparison Suite

bellwether-rs.vercel.app

- Trained and benchmarked Linear Regression, Random Forest, and XGBoost on a 500-row SaaS dataset; reported transparently that Linear Regression outperformed both ensemble baselines on the held-out set, against initial expectations.
- Engineered a Python-to-browser inference pipeline — exporting trained scikit-learn models to ONNX via skl2onnx and serving predictions client-side with ONNX Runtime Web — removing the Python backend from the prediction path entirely.
- Designed four interactive 3D model-comparison visualizations in Three.js / react-three-fiber to surface decision boundaries and error surfaces for non-technical reviewers.
- **Tech Stack:** Python, NumPy, Pandas, scikit-learn, XGBoost, ONNX, skl2onnx, Next.js 15, Three.js, react-three-fiber, TypeScript, Tailwind CSS v4

PLANMATE – Roadmap Planning Tool

planmate-rs.vercel.app

- Designed a weighted-scoring roadmap engine combining dependency-aware capacity packing with a scenario simulator, surfacing quarterly trade-offs side by side for product planning.
- Integrated an LLM-powered copilot answering natural-language queries on roadmap state, blockers, and capacity by injecting the authenticated user's live data into prompt context at request time.
- Implemented end-to-end backend: JWT authentication via jose, bcrypt password hashing, a normalized Prisma 7 schema, and typed REST API routes over PostgreSQL.
- **Tech Stack:** Next.js 16, TypeScript, Prisma 7, PostgreSQL, Tailwind CSS v4, Framer Motion, Zod, JWT (jose), bcryptjs

OPTIVISE – Supply-Chain Intelligence Platform

optimise-rs.vercel.app

- Built a multi-tenant supply-chain intelligence platform with live operational dashboards, inventory simulation, and natural-language querying over PostgreSQL data.
- Developed an LLM copilot grounded in live product and inventory state — pulling tenant-scoped context from PostgreSQL at query time so responses reflect operator-specific data rather than generic suggestions.
- Architected the codebase as a Turborepo + pnpm monorepo with shared TypeScript and ESLint configuration across applications, enabling consistent tooling and incremental builds at scale.
- **Tech Stack:** Next.js 16, TypeScript, Prisma, PostgreSQL, Tailwind CSS v4, Radix UI, shadcn/ui, TanStack Query, Recharts, OpenAI SDK, Turborepo, pnpm

Publications

-
- Co-authored “[Integrating Voting Classifiers to Predict Customer Churn in the Banking Sector](#)” (Springer, pp. 21–30) at the 5th International Conference on Artificial Intelligence and Smart Energy (ICAIS 2025), JCT College of Engineering and Technology, Coimbatore, India, 30–31 January 2025. DOI: [10.1007/978-3-031-90482-0_2](https://doi.org/10.1007/978-3-031-90482-0_2)

Certifications

Analysis of Algorithms (Princeton University, Coursera) • The Complete AI Engineer • Data Visualization with Python • Web Application Technologies and Django • Introduction to DevOps

Organizations & Leadership

-
- **Class Representative Head** — ISA, GCET Student Chapter; liaised between faculty and students, organized chapter activities, and represented peer concerns at department meetings.
 - **Documentation Head** — ISTE, GCET Student Chapter; maintained event records, drafted post-event reports, and managed the chapter's institutional documentation.
